

Announcement of Exhibiting at electronica 2026

Mitsubishi Materials Corporation will exhibit at **electronica 2026**, one of the world's largest electronics trade fairs, which will be held in Munich, Germany, from November 10 (Tuesday) to November 13 (Friday), 2026.

Held every two years in Munich, Germany, electronica brings together cutting-edge technologies, products, and solutions that support the realization of an electrified society, including semiconductors, electronic components, automotive technologies, artificial intelligence (AI), automation, and smart energy solutions.

Under the theme "**For people, society and the earth, circulating resources for a sustainable future**," the Mitsubishi Materials Group will showcase its products and technologies in the **Sensor and driving technology, Microsystems and MEMS** exhibition area. We will present a range of products and technologies for next-generation automotive applications, including thermistor temperature sensors widely used in the xEV market and surge absorbers that protect automotive electronic devices from lightning surges and overvoltages. In addition, we will introduce next-generation mobility solutions that enable highly accurate temperature sensing.

We look forward to welcoming visitors to our booth and providing an opportunity to experience our technologies and products.

■ Exhibition Period

November 10 (Tue) - November 13 (Fri), 2026

■ Venue

Messe München

Am Messesee 2, 81829 Munich, Germany

■ Our Booth

Hall: B4 (Sensor and driving technology, Microsystems and MEMS)

Booth: A07

■ electronica Official Website

[electronica—The entire world of electronics](#)

■ Contact Information

Mitsubishi Materials Corporation

Marunouchi Nijubashi Building, 3-2-3, Marunouchi, Chiyoda-ku, Tokyo 100-8117, Japan

E-mail: mb-market@mmc.co.jp

■ Booth Location
