

Exhibiting the PCIM Europe (11th – 13th of June 2024 in Nuremberg, Germany)

Mitsubishi Materials Corporation will exhibit at the PCIM Europe 2024  together with its subsidiary Luvata Pori Oy. The exhibition takes place in Nuremberg from the 11th until the 13th of June 2024. PCIM is one of the world's largest events for experts in the field of power electronics and its applications. It presents the latest technologies, trends, and information.

Under our commitment to " For people, society and the earth, Circulating resources for a sustainable future," we will exhibit products from the field of power electronics, which is becoming even more important as vehicle electrification and renewable energies become popular.

We focus on the high-performance copper alloy products of the MOFC  and MSP series , which are used in various applications such as electrical circuits and heat dissipation components. We introduce essential products for the thermal management of power electronics , such as bonding materials for modules and dedicated temperature sensors .

In addition, we plan to introduce our efforts to recycle resources, such as E-Scrap recycling (MEX platform ) , which we are expanding our business globally.

¹⁾ According to the organizers, more than 600 exhibitors and approximately 16,000 visitors (2023 results)
